

Analysis of Champlain College's Copy Paper 2006-2020

Observations from FY2020 Analysis:

- (+) We are using significantly less paper than 2006 (75% less) and 28% less than last year. This is likely attributed to further electrifying of processes, use of Papercut for printing and increased use of Canvas for classes. The COVID-19 shutdown of campus from March-June is another factor.
- (+/-) Our amount of non-recycled content paper decreased from last year, but is still higher than 2017. This results in additional costs, as our best price for standard copy paper are the 30% recycled-content offerings. **We need to continue to advise people to purchase cost-saving, recycled content paper.**
- (+) Our overall costs decreased 23% this year, and by 67% compared to costs in 2006.
