

# Analysis of Champlain College's Copy Paper 2006-2021

## Observations from FY2021 Analysis:

- (+) We are using significantly less paper than 2006 (53% less) but 88% more than last year. This is likely attributed to further electrifying of processes, use of Papercut for printing and increased use of Canvas for classes. The prior year was during our total campus shut down and FY21 was more hybrid.
- (+/-) Our amount of non-recycled content paper increased from last year, but is still lower than our peak years. This results in additional costs, as our best price for standard copy paper are the 30% recycled-content offerings. **We need to continue to advise people to purchase cost-saving, recycled content paper.**
- (+) Our overall costs increased 47% this year (as the prior year was so low), but decreased by 52% compared to costs in 2006.
